

An introduction to Samvera : Workshop

8th October 2018

Samvera Connect, University of Utah

*Steve Van Tuyl,
Julie Allinson,
Robin Ruggaber*

samvera

Let's Start with You

- Introductions
- What are your goals for this workshop?
- What interested you in Samvera?
- What are some things you would like to know more about?

What we'll cover

- What is Samvera?
- How We Work
- Example Sites
- Hands-On
- Technical Details
- The Samvera Pitch
- What Next?
- Q & A

Samvera Overview

what is it?

what does it do?

why is it different?

What is Samvera?

- A robust repository fronted by feature-rich, tailored applications and workflows
- Collaboratively built “solution bundles” that can be adapted and modified to suit local needs.
 - ⇒ e.g. Hyrax, Avalon, etc.
- A community extending and enhancing the solutions
 - ⇒ *If you want to go fast, go alone. If you want to go far, go together.*

Why Samvera?

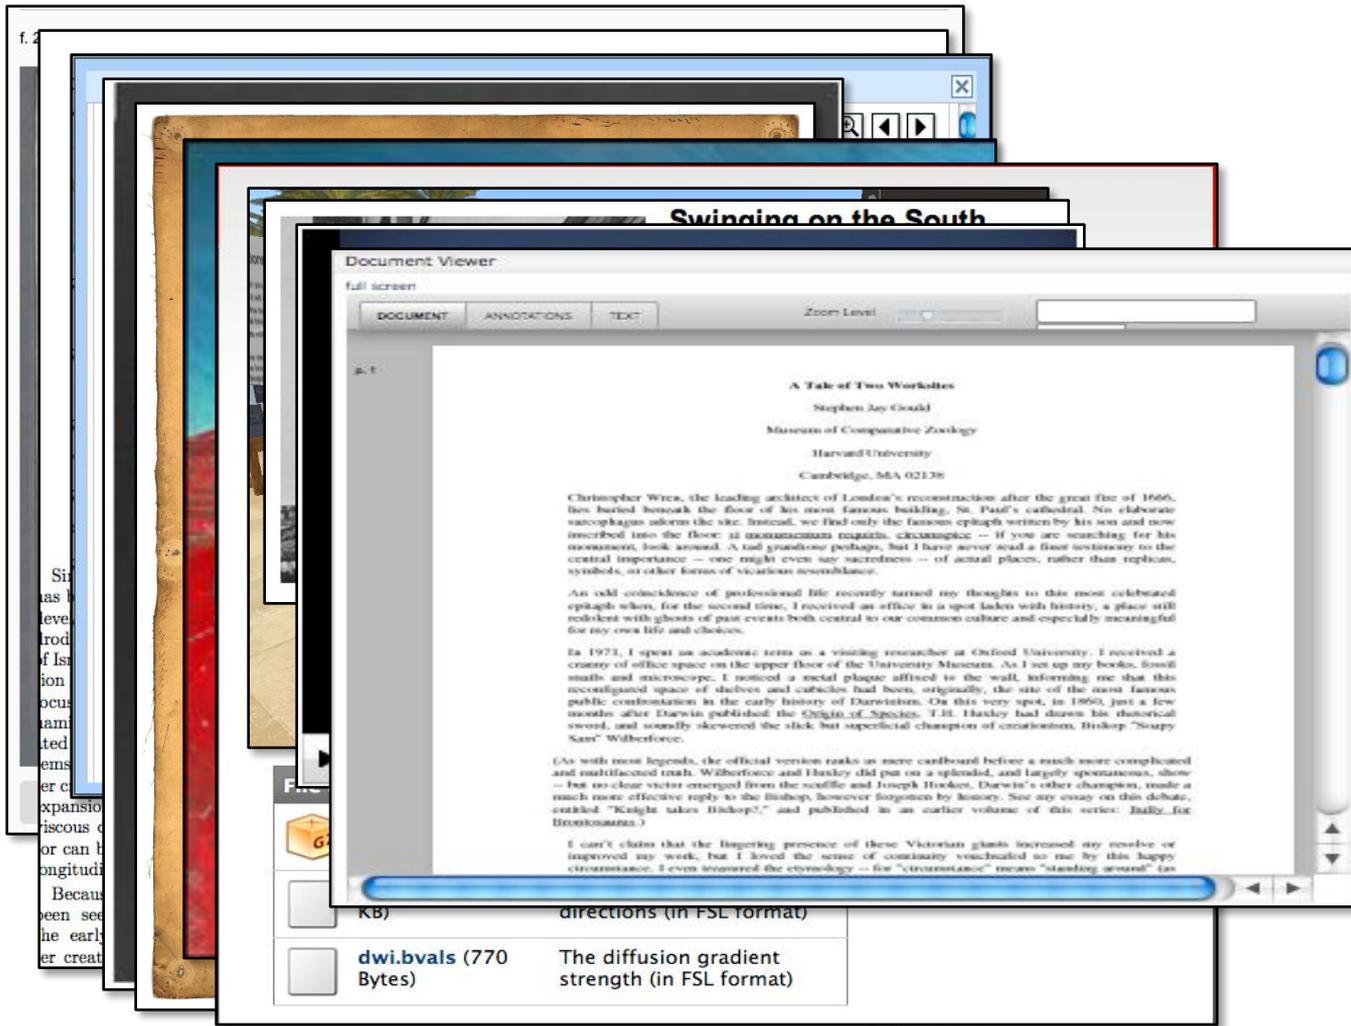

- Need a flexible, rich, robust repository solution
- Be part of a community
 - Shared resources, shared risk, shared advances
- The whole (we) is greater than its parts (each of us)
 - Especially in this crowd
- Control your own destiny
- Build institutional capacity
- The way work is getting done now

Fundamental Assumption #1

No single system can provide the full range of repository-based solutions for a given institution's needs,

...yet sustainable solutions require a common repository infrastructure.

DOCUMENT ANNOTATIONS TEXT

Zoom Level

A Tale of Two Worksheds
Stephen Jay Gould
Museum of Comparative Zoology
Harvard University
Cambridge, MA 02138

Christopher Wren, the leading architect of London's reconstruction after the great fire of 1666, has buried beneath the floor of his most famous building, St. Paul's cathedral. No elaborate sarcophagus adorns the site. Instead, we find only the famous epitaph written by his son and now inscribed into the floor: at monumentum regiarum, circumspice -- If you are searching for his monument, look around. A tall grandiose portage, but I have never read a finer testimony to the central importance -- one might even say sacredness -- of actual places, rather than replicas, symbols, or other forms of vicarious resemblance.

An odd coincidence of professional life recently turned my thoughts to this most celebrated epitaph when, for the second time, I received an office in a spot laden with history, a place still replete with ghosts of past events both central to our common culture and especially meaningful for my own life and choices.

In 1971, I spent an academic term as a visiting researcher at Oxford University. I received a cranny of office space on the upper floor of the University Museum. As I set up my books, fossil snails and microscope, I noticed a metal plaque affixed to the wall, informing me that this reconfigured space of shelves and cubicles had been, originally, the site of the most famous public confrontation in the early history of Darwinism. On this very spot, in 1850, just a few months after Darwin published the *Origin of Species*, T.H. Huxley had drawn his rhetorical sword, and soundly skewered the slick but superficial champion of creationism, Bishop "Stoury Sam" Wilberforce.

(As with most legends, the official version ranks as mere cardboard before a much more complicated and multifaceted truth. Wilberforce and Huxley did put on a splendid, and largely spontaneous, show -- but no clear victor emerged from the scuffle and Joseph Hooker, Darwin's other champion, made a much more effective reply to the bishop, however forgotten by history. See my essay on this debate, entitled "Knight takes Bishop?," and published in an earlier volume of this series: [Daily for Evolutionists](#).)

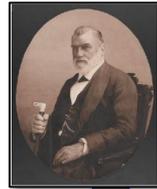

I can't claim that the lingering presence of these Victorian giants increased my resolve or improved my work, but I loved the sense of continuity vouchsafed to me by this happy circumstance. I even treasure the etymology -- for "circumspice" means "standing around" (as

KB) directions (in FSL format)

(CUD)

Search/View
(R)

Repository/
Persistent Storage

CRUD in Repositories

Used by:

- Large Universities
- Small Universities
- Colleges
- Public Broadcasting
- Government Ministry
- National Libraries
- National Lab
- Small Research Labs
- National Digital Repository
- Statewide Digital Libraries
- Science History Institute
- Museum of Performing Arts
- A Shakespeare Festival

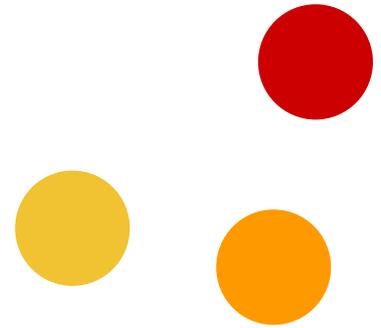

Used for:

- Self-deposit system
- Digital Collections System
 - Sheet Music
 - Architectural resources
- Electronic Theses & Dissertations
- Digital Image System
- Media Management
- Media Preservation System
- Research Data Management
- Digitization Workflow System
- Digital Preservation System
- Digital Archives System
- Library Monograph Acquisitions System
- And more!

Next Up:

How we work

How do I get involved?

Fundamental Assumption #2

No single institution can resource the development of a full range of solutions on its own,

...yet each needs the flexibility to tailor solutions to local demands and workflows.

Samvera Philosophy: A Community

- An open architecture, with many contributors to a common core
- Collaboratively built “solution bundles” that can be adapted and modified to suit local needs
- A community of developers and adopters extending and enhancing the core
- “If you want to go fast, go alone. If you want to go far, go together.”

The Samvera Way

- Not a directed project
- Investment in a framework, not an application
 - Contributions back to core code base
- Investment in a community, not a vendor
 - Contributions back to community: Training, documentation, modeling, evangelism, support
- Travel / face-time

Community

- Conceived & executed as a distributed, collaborative, open source effort
- Initially a joint development project between Stanford, Univ of Virginia, and Univ of Hull
- Samvera Partners are the backbone of the project
 - Coalition of the willing
 - No fees or dues
 - Apache-style consensus and governance
- Steering Group provides administration, continuity, and serves as backstop
 - But no central planning, no Project Director, no “one” architect

Community Structure

- **Steering Group** (elected by partners)
Stewards of the project - individual membership
- **Partners** (Institutional)
Formally committed institutional membership
- **Working & Interest Groups**
Typically aligned groups that span organizations & roles
- **Committers**
Developer community
- **Community adopters**

Samvera Partners

...are individuals, institutions, corporations or other groups that have committed to contributing to the Samvera community; they not only use the Samvera technical framework, but also add to it in at least one of many ways: code, analysis, design, support, funding, or other resources.

Samvera Partners collectively advance the project and the community for the benefit of all participants.

Training & Connecting

- **Good**: read the documentation and learn-by-doing
- **Better**: connect through social channels
 - Email lists, IRC, weekly phone calls
 - Github interactions
- **Best**: meet in person. Face time fuels collaboration!
 - Samvera Connect: annual, worldwide, community meeting
 - Samvera (Partner) meetings: 3-6 ad hoc, topic-based meetings per year (usually)
 - Regional Groups: convening ad hoc

Get Involved: Many Hands Make Light Work

- Getting involved with Samvera can be at different levels:
 - Adopter
 - Developer
 - Partner
- Need to ask:
 - What involvement is required to enable you to meet your needs?
- But also,
 - If we contribute back, what more do we gain?

Stay Connected

- Website (<http://samvera.org>)
- Wiki page (<https://samvera.org/wiki>)
 - Partner meeting agendas & notes
 - Events & Details
- Monthly Partner calls
- Partner listserv
- Samvera Partner meetings & Samvera Connect
- Identify a Samvera Partner doing similar work and get in touch
- Identify need for vendor input and make contact to discuss options
- Come to events (like this one!)

Interest & Working Groups

- Collection Extensions Working Groups
- Component Maintenance Working Group (Phase 1)
- DSpace/Samvera Interest Group
- Hyrax Analytics Working Group
- Repository Management Interest Group
- Samvera Applied Linked Data Interest Group(formerly Working Group)
- Samvera Archivists Interest Group (formerly Working Group)
- Samvera Code Stability Working Group
- Samvera CONTENTdm Migration Interest Group
- Samvera Contribution Model Working Group
- Samvera Data Mapper Working Group
- Samvera Documentation Working Group(enrolling)
- Samvera EZID to DataCite DOI Working Group
- Samvera Geo Predicates Working Group
- Samvera Geospatial Interest Group
- Samvera Governance Working Group
- [Samvera Hyrax Batch Import Export Working Group](#)
- Samvera Marketing Working Group
- Samvera Metadata Interest Group (formerly Working Group)
- Samvera Newspapers Interest Group
- Samvera Permissioning Analysis and Design Working Group
- Samvera Interest Group for Advising the Hyrax Roadmap (SIGAHR)
- Samvera URI Selection Working Group
- Samvera User Experience Interest Group

Communication Channels

- **Slack** - for real-time interaction
- **E-mail** - for asynch and longer discussions
- **Community Calls** - Samvera Tech & Community calls, Virtual Connect
- **In Person** - Connect, regional meetings, other conferences, & workshops

Community Resources

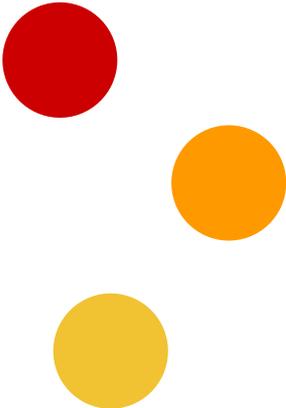

- **Website** - Introduction to the community:
<https://samvera.org>
- **Wiki** - Broad range of information types:
<https://samvera.org/wiki>
- **Github** - Code, code wikis, technical details:
<https://github.com/samvera>
<https://github.com/samvera-labs>
<https://github.com/samvera-deprecated>

Code Licensing

- All Samvera code is available under Apache License, Version 2.0
- All code commitments are being managed through Contributor License Agreements
 - Individual – each developer is clear about what they are contributing
 - Corporate – each institution is clear about what it is contributing
- Code contributors maintain ownership of their IP
 - ...and grant a non-exclusive license to the project and its users

First Up:

Example Sites

What are folks doing with it?

INDIANA UNIVERSITY

Media Collections Online

- Built using the *Avalon Media System*
- Rich tool for management and discovery of audio and visual resources
- Provides gated discovery and streaming authentication

Live Site: <https://media.dlib.indiana.edu>

Alexandria Digital Research Library

- Fedora 4 + RDF based
- Broadly focused Institutional Repository hosting multiple content types
- Includes a mix of born digital and digitized content

Live Site: <https://www.alexandria.ucsb.edu>

Earthworks

- Heterogeneous GIS Content
- Search and browse augmented by spatial search functions
- Includes content harvested from multiple sources

Live Site: <https://earthworks.stanford.edu>

King's Fund Digital Archive

- Running on Hyku software
- Digitised publications by the King's Fund
- Heavy use of IIF and Universal Viewer

Live Site: <https://archive.kingsfund.org.uk/>

Emory ETD Repository

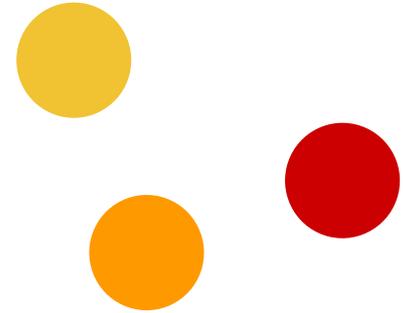

- Hyrax Development
- Electronic Theses and Dissertations focus
- Student submission and workflow focused

Live Site: <https://etd.library.emory.edu>

Hands-On

Any questions so far?

Create an account

1. Visit <http://connect18.demos.leaf.ulcc.ac.uk>
2. Click the Login link
3. Click on “[Sign Up](#)”
(just under the Login button)
4. Enter your e-mail, choose a password, and click on “Sign Up”

Deposit a new work

1. Click on the logo in the upper left corner
2. Click on the “[Share Your Work](#)” button
3. Select a type of work
4. Add required metadata, attach a file, choose visibility, accept the deposit agreement
5. Save your work

Edit your work

1. Choose “Dashboard” from the menu in the upper right corner
2. Click on [Works](#)
3. Use the “Actions” dropdown to choose edit
4. Enter some data in “Additional Fields”
5. Add a file or two, update versions

Browse content

1. Click on the logo in the upper left
2. Click on the [search icon](#) to browse the repository
3. Use search and facet to narrow results
4. View some items
5. Is your item there?
6. Log-out - how does your experience differ?

Deposit a new work

1. Reminder: Logo, Share, Select
2. Add required metadata, attach a file, choose visibility, accept the deposit agreement
3. Save your work

View your work?

1. Reminder: dashboard, works
2. What do you see?
3. What does your administrator see?
4. Approve some works (Admins)
 - a. All Works
 - b. Review Submissions
 - c. Notifications

Other features to try

1. Everyone

Gated discovery: Public, UoL, Private
Collections

2. Admins

Featured works

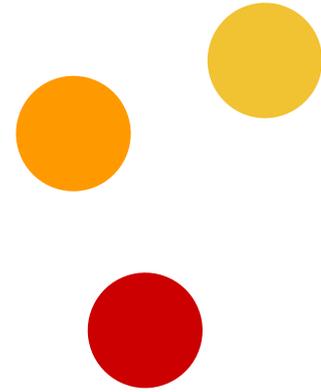

Workflow / Review

Admin dashboard

Tech Details

(totally optional)

Any questions so far?

Major Components

A Note on Fedora

- **Flexible, Extensible, Durable Object Repository Architecture**
 - Flexible: model and store any content types
 - Extensible: easy to augment with apps and services
 - Durable: foundation of preservation repository
- Proven, sustained and successful digital repository
 - 100's of adopters; 13 years of development, 4 major releases
 - Vibrant community & funding under DuraSpace

Current status of Fedora

- Fedora 4.0 released in Dec 2014
 - Major rewrite, incompatible with Fedora 3 and earlier
 - Current release: 4.7.5 as-of 12th February 2018
- Fedora 5, in development
 - Compatible with Fedora 4
 - API specification to allow multiple Fedora software implementations

A Note on Rails

- *Rapid* application development for web applications: “Convention over configuration”
 - 10x productivity
- Supportable: 14 years of production use with major implementations across the internet - Github, Airbnb, Square, and 1000s of others
- Testable: Rspec & Capybara give powerful, automatable, testing tools
- Learnable: Stanford went from 1 to 8 Ruby savvy developers in one year (no new hires)
 - 1 week learning curve to basic proficiency

Hyrax Repository Engine

- Feature Rich
- Complex objects based on PCDM in Fedora 4
- Evolved from Sufia 7, one of most actively maintained and widely used community gems

Hyrax

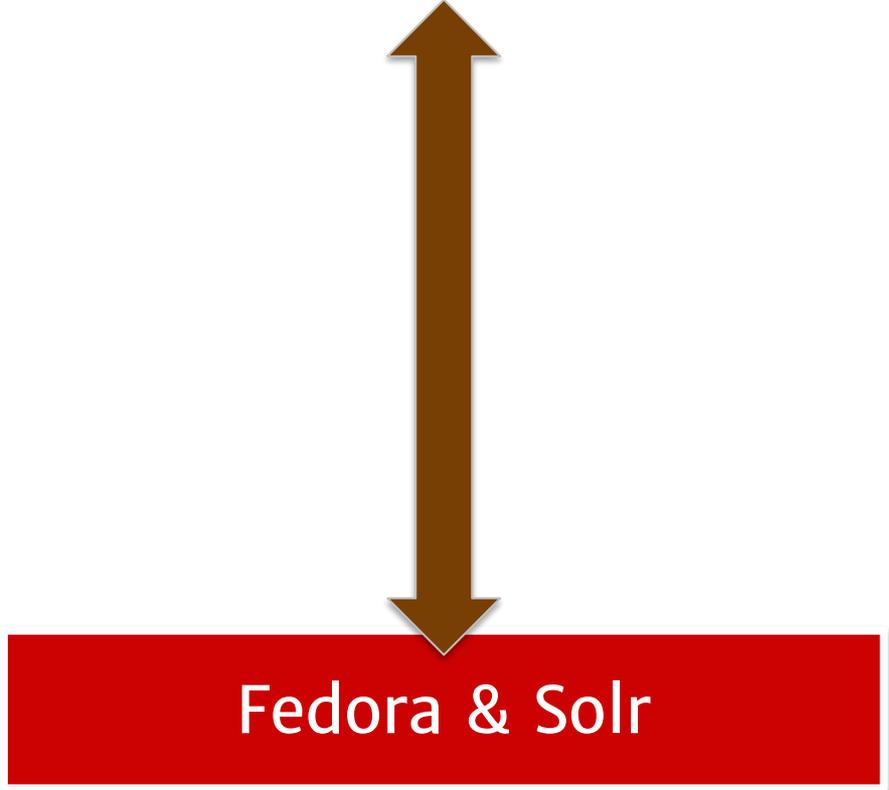

Hyku

- Availability: DIY, Hosted (via several service providers)
- Goal: turnkey ease of installation and management
- Goal: Provide configured version of Hyrax with multitenancy

The Stack

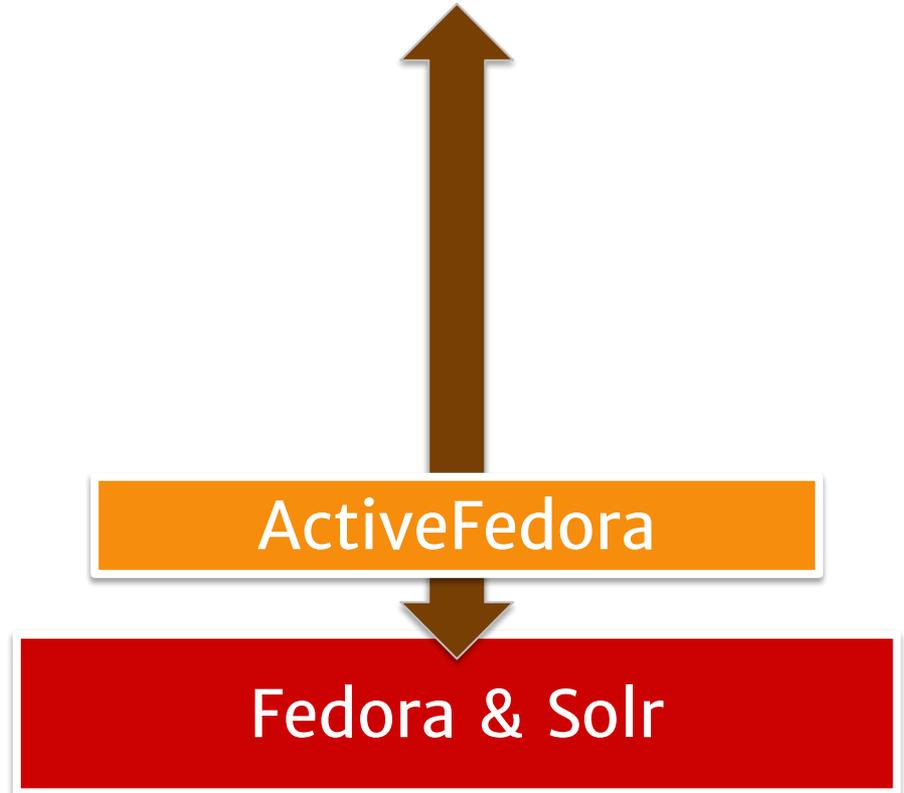

Samvera is designed to provide a rich front-end framework for a Fedora based repository. We use Solr to index, search, and discover content in the application.

Fedora & Solr

The Stack

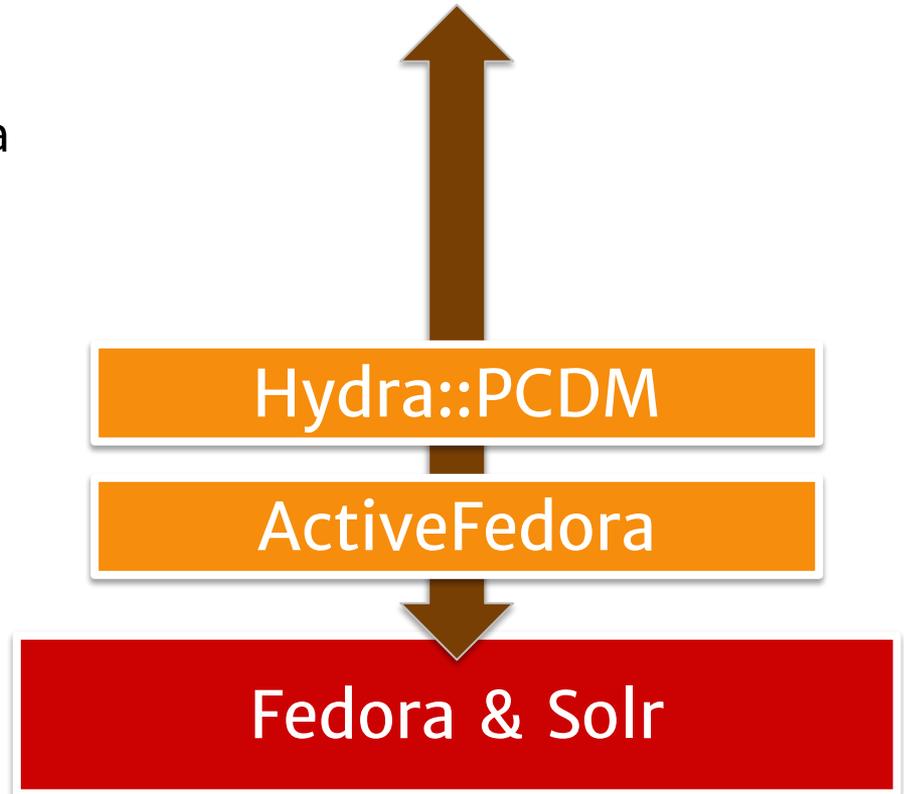

The ActiveFedora gem provides an interface for rails based applications to interact with Fedora and Solr. This allows developers to focus on user facing application features instead of re-inventing low-level repository interfacing.

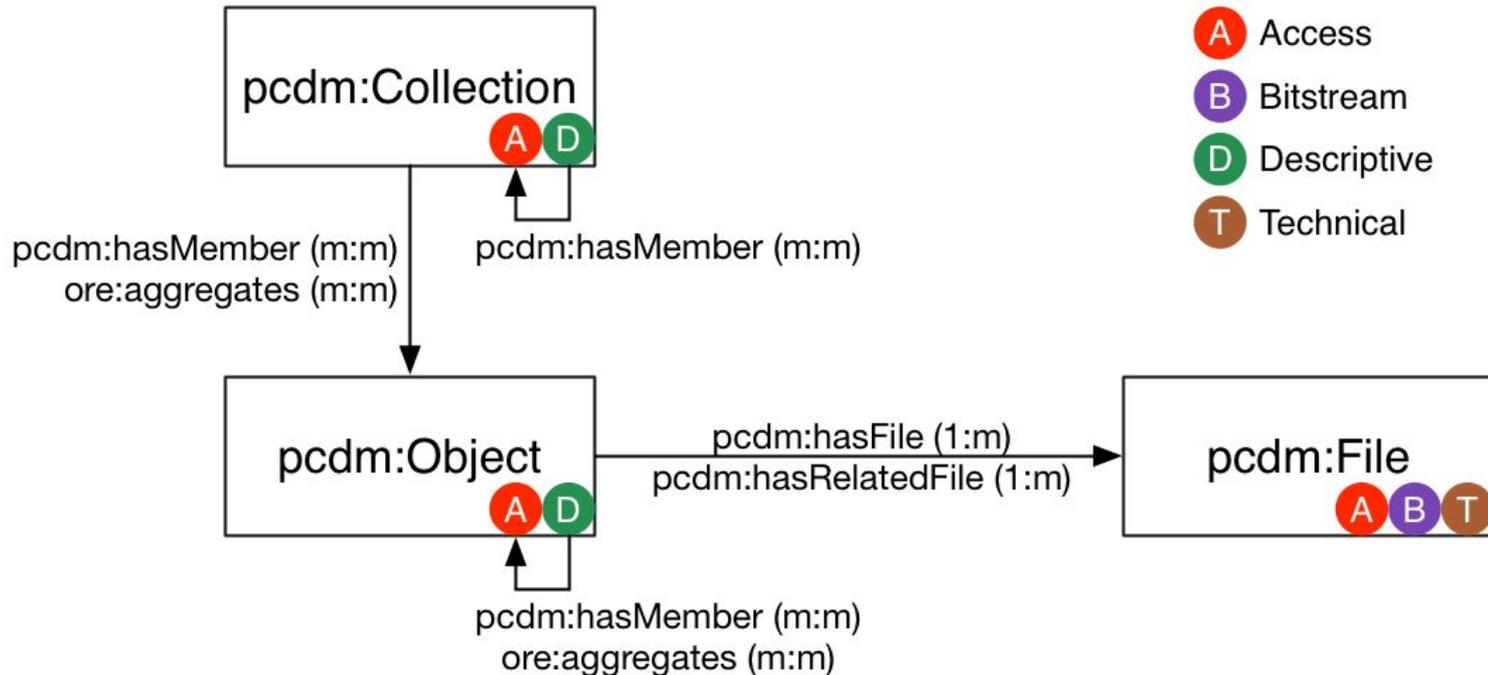

The Stack

Using the Portland Common Data Model (PCDM) gives the community a common data modelling tool-set. This, in turn, supports a much broader range of code reuse at higher levels.

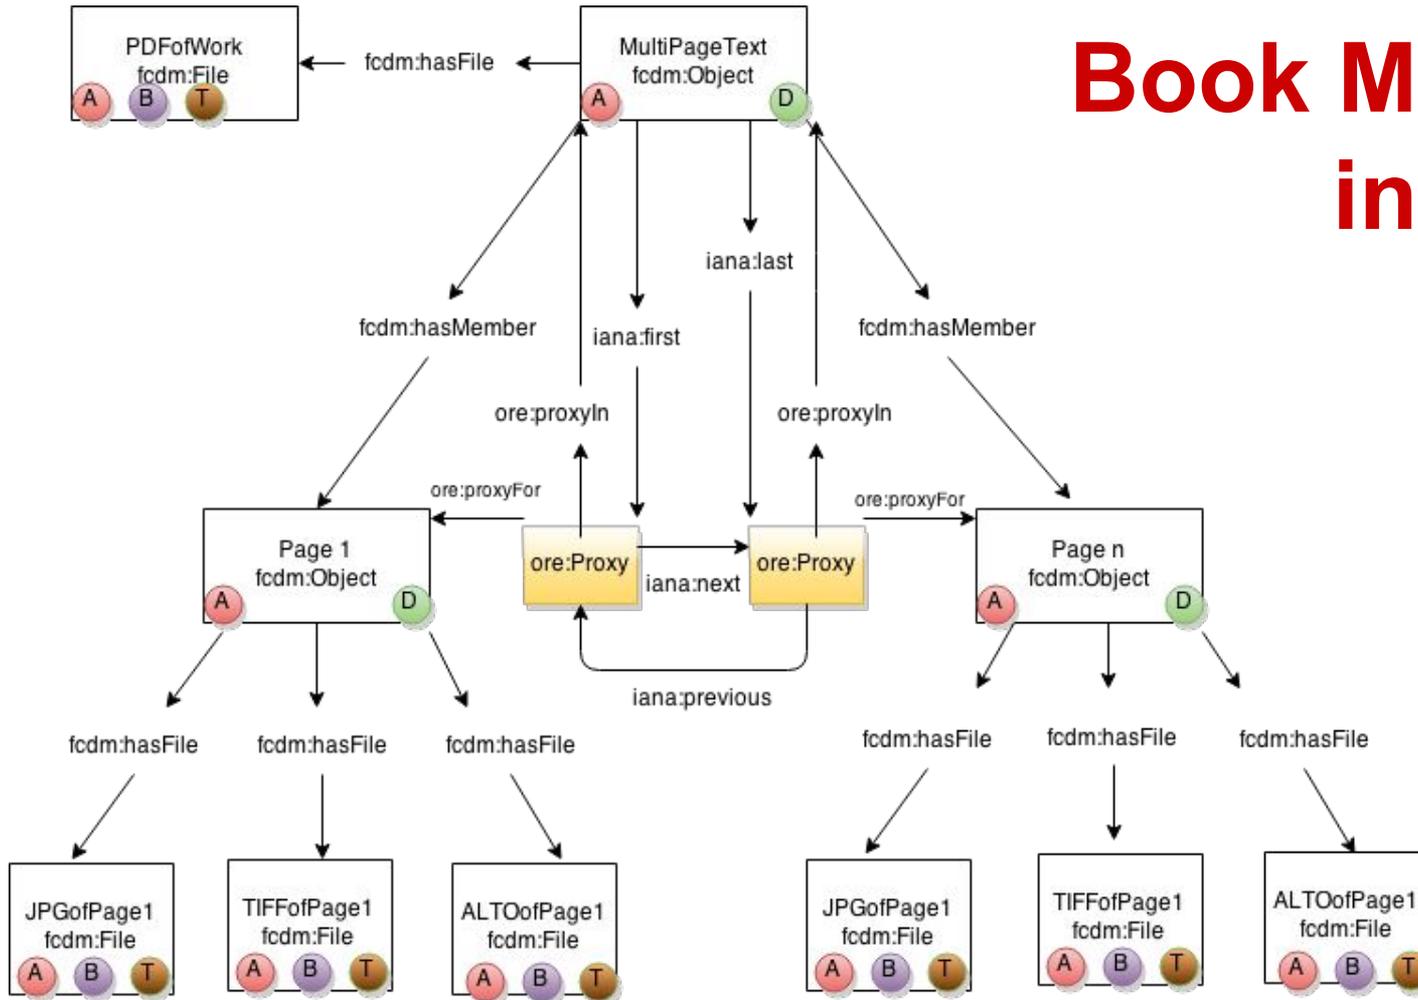

PCDM simplifies the creation of complex works and collections.

PCDM (interlude)

Book Modeled in PCDM

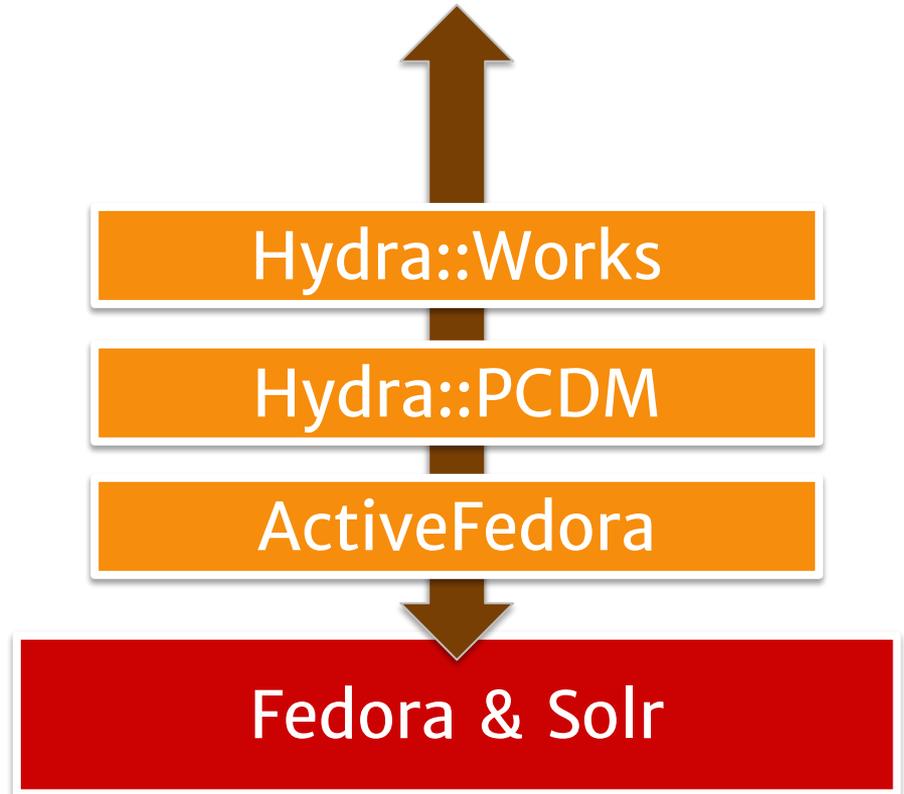

The Stack

The Works gem provides the utility drawer for managing digital content by defining common patterns for:

- File Characterization
- Derivative Generation
- Virus Scanning
- Text Extraction

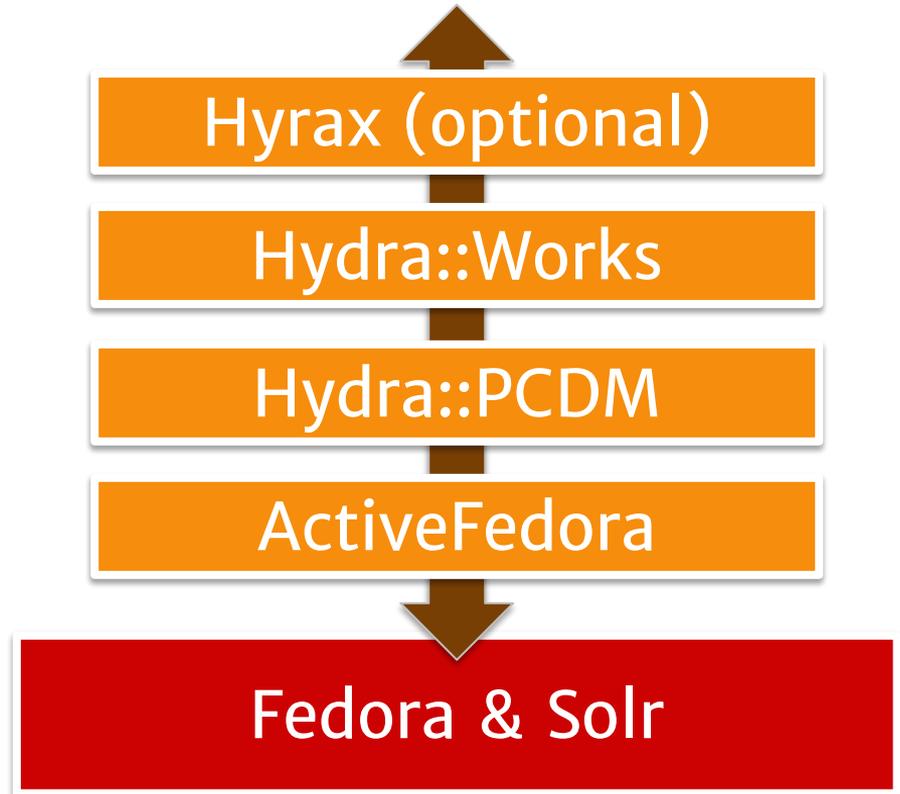

You can tailor any of these to local requirements, but get working solutions out of the box.

The Stack

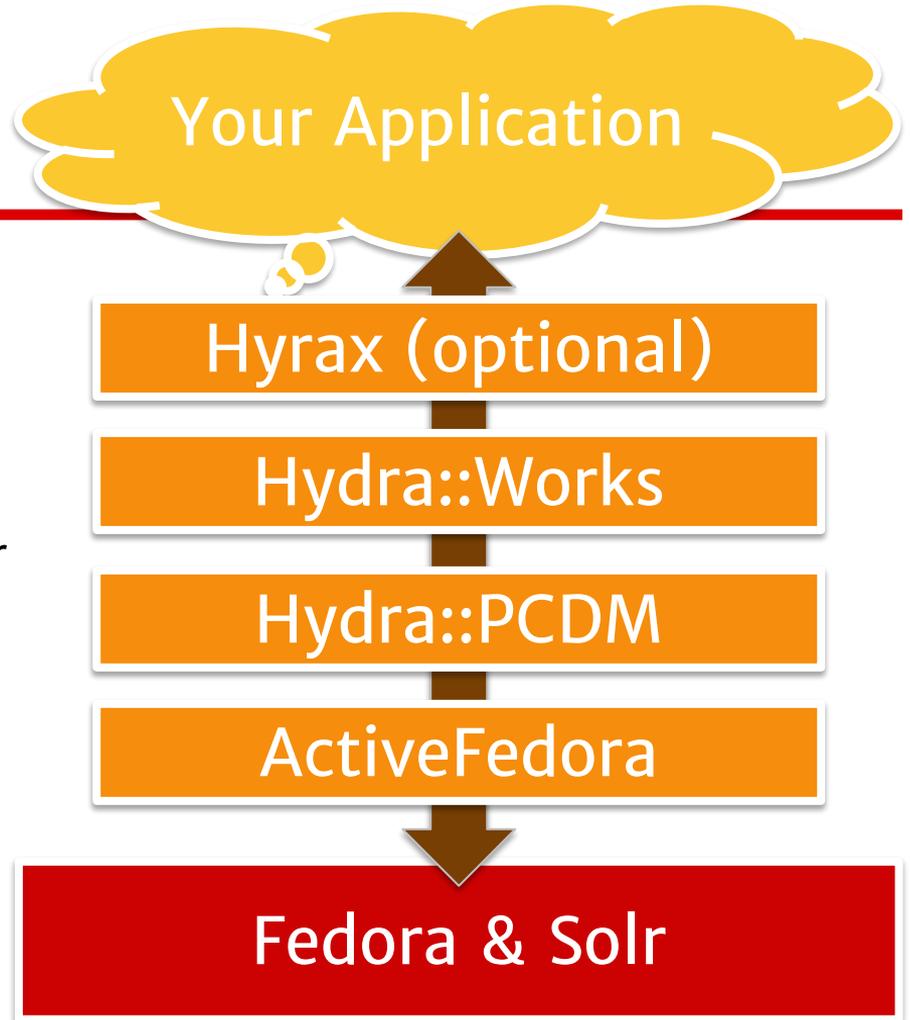

The Hyrax rails engine provides a fully featured repository front end with self-deposit and administrative workflow features along with:

- User & Admin dashboards
- Upload via cloud providers
- Citation integration
- File auditing & versioning
- Access controls
- Leases and embargoes

The Stack

Your own ruby-on-rails application can be a very lightweight wrapper around an existing application like Hyrax or Avalon, or a highly tailored in-house solution depending on your needs and your team's capabilities.

Next Up:

The Samvera Pitch

The Elevator Pitch? Who's Riding?

- UL/Dean or CIO? Resources and Risk - doing more with less while control the runway, maturity
- Content Specialists? Flexibility and Risk- reducing barriers to effective asset management & preservation
- Management - The Churn - Architecture, flexibility, evolution in a vibrant community, staffing impact
- Developers, PMs, DevOPs, -Connection, Time, Training, Visibility - It's a Family Affair and you are not alone

Community Sustainability...

- Core Purpose- We believe it is possible to provide and evolve solutions which reduce cost and risk in stewardship of digital assets for access and preservation.
- Partners - The whole is greater than the sum of its parts - partners join equally to share the load for mutual gain and greater good.
- Flexible Change with Steady Growth

A Worldwide Presence

Samvera's Partners (red), adopters (blue) and solution bundle users (green) - 2017

Samvera Partners

- DuraSpace
- Stanford University
- University of Hull
- University of Virginia
- University of Notre Dame
- Northwestern University
- Columbia University
- Penn State University
- Indiana University
- London School of Economics and Political Science
- Data Curation Experts
- WGBH
- Boston Public Library
- Duke University
- Yale University
- Virginia Tech
- University of Cincinnati
- Princeton University Library
- Cornell University
- Oregon State University
- University of Oregon
- Tufts University
- University of Alberta
- Digital Public Library of America (DPLA)
- University of Michigan
- University of California, San Diego
- University of York
- Lafayette College
- Washington University in St. Louis (WUSTL)
- The Digital Repository of Ireland
- University of California, Santa Barbara
- University of Houston Libraries
- Emory University
- CoSector, University of London

Resource Sustainability

- New Approach for Cross Training
- Reducing Turnover Impact
- Time - If you want to go fast ~~...go alone.~~
...use Samvera

Solution Sustainability...

- Protecting the partner & funders' investment - together build, leverage & evolve
- Organization & Governance
- Adopt best practices
