Bulkrax

A 'batteries included' Samvera importer

Importing and exporting records in bulk is a common requirement and one for which there is no single community solution. Use cases are varied, from importing from mass digitization projects, to migrating systems, to editing metadata for re-import.

From stacks...

...to racks.

Bulkrax includes support out of the box for:

- OAI-PMH & CSV import
- Configuration of field mappings from the source data to Hyrax

Repeatable: perform the same import without creating new records.

Extensible: allows you to easily add new importers in to your application.

Full **admin interface** including creating, editing, scheduling and reviewing imports.

How it Works

Bulkrax provides access to an easy to use interface with which you are able to create, edit, delete, run, and re-run imports. Imports can be scheduled to run once or on a daily, monthly or yearly interval. These features are available to admins via the Importers tab on the dashboard.

View

View a list of importers from the admin dashboard, with details of:

- Last run
- Next run
- Number of records queued/processed
- Failures
- Upstream deletions
- Total records

| Importers | | | | | | | |
|-----------|--------------|----------|------------------|-------------------|----------------|--------------------------|---------------|
| Name | Last Run | Next Run | Records Enqueued | Records Processed | Records Failed | Records Deleted Upstream | Total Records |
| CSV Test | Sep 27, 2019 | | 5 | 5 | 0 | 0 | 5 |
| test OAI2 | Sep 27, 2019 | | 0 | 0 | 0 | 10 | 10 |

Create

Select "New" button and complete the form.

Edit

Select "Edit" (pencil) icon and complete the form.

Delete

Delete an importer by selecting the "Delete" (x) icon.

Exporters and more...stay tuned!
